Biomass Analysis

Strongly Agree

Analyzing biomass for electricity production and GHG emissions imporphex.

Biomass for Heat at a Residential and Commercial Scale and Verme 's forests writ large bear further exploration

Biomass Electric Production in Vermont

New large-scale industrial electric generation biomass facilities in Vermont should not be built to decarbonize Vermont's electricity rodution

The two existing biomass electricity facilities should not be expanded to gener more electricity

The specific expansion of the McNeil plant for co-generation of thermal heat poses unknowns & right

Improvements without expansion for efficiency could occur as long there no increase in adverse impacts like meanissions or community impact

IF to phase out the two existing two electric biomass facilities would need further analysis of impacts across sectors

Strongly Agree
